ASIM ADVANCED

FULL-SCALE SIMULATION OF
YOUR WORST DAY, WITHOUT
THE HEADLINES

On paper, most agencies have a solid active shooter plan. The gaps only show up when everyone is in the fight at once. ASIM Advanced is a 3-day, 24-hour high-fidelity simulation that stress-tests your plan with up to 60 participants across law, fire/EMS, dispatch, PIO, EM, and air.

SCHEDULE A BRIEF CALL TO SEE IF
ASIM ADVANCED FITS YOUR TRAINING PLAN.

Test your full team on the ASIM Checklist in a safe, high-fidelity environment.

WHAT ASIM ADVANCED DOES

ASIM Advanced takes your written active shooter plan and **tests it under real pressure**. Over three days, up to 60 participants from across your disciplines run 10 complete simulated incidents, working the actual ASIM Checklist positions until they're automatic.

- 24-hour, 3-day course for up to 60 participants
- Includes law, fire/EMS, dispatch, PIO, EM, and air assets
- Uses a multi-responder 3D simulation system
- 10 full incident reps from first call to last transport
- Participants rotate through ASIM Checklist roles to build real experience
- Identifies command, communication, and coordination gaps before a real event

Stress-Test Your Full Team

Put law, fire/EMS, dispatch, PIO, EM, and air into the same simulation so you see how the whole system works, not just one piece.

Practice Under Pressure

Run 10 complete incidents using the ASIM Checklist so key positions and actions become second nature when it counts.

Find Gaps Before Reality Does

Surface and fix plan and communication failures in the sim lab, with after-action records you can show to leaders and stakeholders.
